Built for developers, Loved by everyone

SITELEAF IS A CONTENT MANAGEMENT
SYSTEM DESIGNED FOR A BETTER WEB.

▶ WATCH THE INTRO

Develop with existing tools

Code offline with Jekyll, sync with
GitHub

Edit in the cloud

Easy for non-technical clients,
writers, and producers

Free your content

Access by API or generate static
sites to S3, GitHub, FTP

[Get started](#)

Content management for the whole team

Collaborate

Invite your client or team to create and edit content. Set them as Admin, Publisher, or Writer.

Preview before you publish

Preview changes before they go live. Then publish with one click whenever you're ready.

Smart text editor

Choose between a visual editor or just plain Markdown. Drag and drop images or even entire text files.

Powerful content

Customize your site with document collections, advanced metadata, and custom permalinks.

Develop with tools you already love

Built on open source

Siteleaf is compatible with [Jekyll](#), the static site

```
E html>

<!--
  layout: default
-->

<article class="post">
  <header class="post-header">
    <h1 class="post-title">{{ page.title }}</h1>
    <p class="post-meta">
      <time datetime="{{ page.date | date_to_xmlschema }}">
        {{ page.date | date: "%b %-d, %Y" }}
      </time>
      {% if page.author %}
        <span class="post-author">
          {{ page.author }}
        </span>
      {% endif %}
    </p>
  </header>
  <div class="post-content">
    {{ content }}
  </div>
</article>
```

generator for over half a million websites running on GitHub Pages.

Benefit from a large open source community. Use any existing Jekyll theme, or write your own using [Liquid](#), [Sass](#), and [CoffeeScript](#). Develop locally and even offline.

jekyll *Sass* *CoffeeScript*

GitHub integration

No more accidental overwrites or deletes. Any change made in Siteleaf can be synced to GitHub, where you can see a log of edits and roll back to any state, giving you a time machine for your content.

As you develop your theme, Siteleaf can also automatically update to reflect your GitHub commits. Fits right into your existing workflow.

Free your content

Publish anywhere

Generate static sites to [Amazon S3](#), [GitHub Pages](#), [Rackspace](#), or FTP using your own domain name.

Import and export

Easily move your content into or out of Siteleaf. [Import](#) from WordPress, Drupal, Tumblr, Ghost, and more.

API for your content

Access [your data](#) and integrate into other websites and apps. Automate tasks with [Zapier](#).

Launch better sites

We believe that content management shouldn't be hard. That you should be able to host your website wherever you want. That websites should be able to outlive their CMS. Our tools should be simple, but never dumbed down.

Static sites are faster, more secure, and keep visitors happy. And speed matters: According to Google, **nearly half of all visitors will leave a mobile site if the pages don't load within 3 seconds.**

Best of all, unlike legacy CMSs such as WordPress and Drupal, your website's entire source code and content are completely portable. Never be locked into a particular service again. An Open Web is a better web.

Join thousands of happy customers

@siteleaf is a pretty handy tool for making custom websites that humans can edit. Hooray!

Anna Zocher
@annazocher

Spending today converting sites to #Liquid to show client how great @siteleaf is going to be use.

Casey Gollan
@CaseyG

Playing with @siteleaf. As nimble to build with as Jekyll for me. Easier to use than Wordpress for my client.

That’s what’s deceiving about [@siteleaf](#): looks simple, but it’s pretty powerful.

Starting building my new website on [@siteleaf](#) v2—its Github syncing and Jekyll-compatibility are absolutely killer.

I’ve been using [@siteleaf](#) for 30 mins and, like all [@oakstudios](#)’ products, it’s a dream to work with. Never again, Wordpress. Never ever.

Create something great

Free for developers and open source projects.
